Subject: Re: New External packages Posted by Dima Melnychuk on Thu, 13 Mar 2008 15:01:03 GMT View Forum Message <> Reply to Message

Hi Mohammad,

I have the following problem with new external packages.

When I run

./configure.sh automatic

I have the following message

The build process for the external packages for the FairRoot Project was started at 130308_153705 Could not extract the version of gfortran Stop script at this point

When I try >gfortran -dumpversion

it gives:

GNU Fortran 95 (GCC 4.0.2 20051130 (Red Hat 4.0.2-14.EL4)) Copyright (C) 2005 Free Software Foundation, Inc.

GNU Fortran comes with NO WARRANTY, to the extent permitted by law. You may redistribute copies of GNU Fortran under the terms of the GNU General Public License. For more information about these matters, see the file named COPYING

So when I look into /scripts/set_compiler.sh on the line 20

if [\$(gfortran -dumpversion | grep 'GNU Fortran 95 (GCC)' | cut -c 1-3)];

my "gfortran -dumpversion" output mismatch this pattern, since bracket is not closed after GCC.

I am using Scientific Linux 4.

How to proceed?

Dima
