Hello Mohammad,
        I have the following gfortran

GNU Fortran 95 (GCC 4.0.0 20050406 (Red Hat 4.0.0-0.41.fc3))

in the machine I am trying to compile.

The Problem was the response of the

gfortran -dumpversion command.

I have added the following lines in my set_compiler.sh script.

```
 elif [ $(gfortran -dumpversion | grep 'GNU Fortran 95' | cut -c 1-3) ];
   then
     gfortran_major_version=$(gfortran -dumpversion | grep 'GNU Fortran 95' | cut -c 21)
     gfortran_minor_version=$(gfortran -dumpversion | grep 'GNU Fortran 95' | cut -c 23)
```

from lines 28 to 31.

now the compilation is going smooth.
