Hi!

I have found a bug in CbmTrackParP. There is an array which is uncoorrectly initalized:

```
-  Double_t PD[3], RD[6][6], H[3], CH, SP1, PC[3], RC[3];
+  Double_t PD[3], RD[6][6], H[3], CH, SP1, PC[3], RC[15];
```

The lower row is the fix.

With this the initialization problem is solved.
GeaneTrackRep is running now. However I still do not get the correct results as on my old system. TBC...

Cheers! Sebastian.
