Hi,

I installed a 32 bit and a 64 bit version (binaries with libs only) of the UrQMDSmm eventgenerator on the Grid, compiled against root5.18 (which version is the most actual one for the external packages). It seems to work for the sites I could test it on. To test it on any site:

Installation (presently already instaled at KVI,GSI,Juelich,Dubna,Bucharest)

packman install pbarprod@urqmd::r2008

test scripts

/panda/user/p/pbarprod/bin/testurqmd.sh
/panda/user/p/pbarprod/jdl/testurqmd.jdl

i.e.

submit /panda/user/p/pbarprod/jdl/testurqmd.jdl <id> <momentum> <nrofevents>

will do the job with the output @

/panda/user/p/pbarprod/jgm/urqmd/run<id>/..

Johan.

(ps thanks to Aida and Vladimir!)
