Dear Mohammad,

I have tested the possibility to import my root geometries with a GeoManager in the file.
Unfortunately this fails with the error message:

==> GEANT4 materials created and mapped to TGeo ones...

Cannot make material for volume: TOP

Aborting in CreateLogicalVolume()

*** G4Exception: Aborting execution ***

Without the GeoManager the import works fine.

I have added both files to the forum entry. The file with "_wG" contains the GeoManager

Cheers,

Tobias
