Hi Alicia!

Make sure that all your tracks have really been fitted succesfully (statusflag==0 in the CardinalRep).

There are some problems with low energy particles still, where GEANE seems to fail. This is under invetiagtion.

I just used 500Mev Muons and it worked.

I submit the code as I have it right now. I also built in an error message which tells you if a track is discarded by the ToolsTask.

Cheers! Sebastian.
