Subject: CMake and fortran
Posted by StefanoSpataro on Mon, 21 Apr 2008 09:21:51 GMT

Hello,
here in Gießen we have both gfortran and g77, but it seems cmake enables only and always gfortran:

-- Check for working C compiler: gcc
-- Check for working C compiler: gcc -- works
-- Check size of void*
-- Check size of void* - done
-- Check for working CXX compiler: c++
-- Check for working CXX compiler: c++ -- works
-- Check for working Fortran compiler: gfortran
-- Check for working Fortran compiler: gfortran -- works
-- Checking whether gfortran supports Fortran 90
-- Checking whether gfortran supports Fortran 90 -- yes

I would like to use only g77. I have tried to search deep in the code, but I have not found where it tries to find the fortran compiler.

So my question is: how can I let my cmake choosing g77 instead of gfortran?

(the answer "remove gfortran" is not allowed...)
