Hello,

I have added in gconfig directory a preliminary "rootlogon.C" file.
Maybe something is missing there, in the case just post here in the forum what you miss.

In order to use it, you have to create in your home directory a file called .rootrc, and there you have to write the following line:

Rint.Logon: $(VMCWORKDIR)/gconfig/rootlogon.C

Nothing else. And you will have all the libraries loaded in the correct way each time you will open root (but only after you have called the config.sh script, that set VMCWORKDIR).
