I do not include EmcCluster for the lheTrackFinding and LheTrackFitting, I include only Mvd Points and TpcPoints,
From the last point in the track, I switch off the Emc part in the LheHitsMaker

I do the Geane Propagation to Emc volume. So, I have the Geane guess of where the cluster is going to be for that track.

now I want to do the position-position matching to the Geane guess with the reconstructed clusters in Emc.

unfortunately Emc reconstruction and Geane Propagation don't work together.
