Hi all,

This topic is there to put very small bug reports with a solution. Obviously this only holds for parts of pandaroot where you cannot check in to svn (i.e. the base packages). Whoever applied the changes shall put a small note here, too.

An admin might want to make this topic as sticky...

Here we go for the first one:

In pandaroot/parbase/CbmGenericParAsciiFilelo.cxx:68 at the end of the line the "/s" should be a "%s".

Nice greetings from Dresden,
Ralf.
