Subject: How to store only MCTrack in a root file? Posted by Aleksandra Biegun on Mon, 02 Jun 2008 15:44:46 GMT View Forum Message <> Reply to Message

Hi,

I have 2 questions:

how I can store the MCTrack three into a root file with a full simulation (or)
is there a possibility to rewrite only MCTrack three into a new root file (from a simulation file which contains others threes) ?

I need only MCTrack and the simulation file with all informations for Points is quite big.

Thanks in advance for the answer.

Cheers, Ola.
