Hi!

With the modifications you gave me for the GeaneTrackRep I still see the divergence.  
I have check my stuff in now. So you can try the demo andf have a look.

The pictures below show the convergence behaviour of the genfit kalman for the LSLTrackRep  
(first plot) and the GeaneTrackRep. Both plots show  $q/p$  as a function of the Kalman Steps.

For both plots the same events were processed in the demo.

At the moment I have no idea...  
Sebastian.
