Hi all,

I have found that a lot of problems was connected with

```
gSystem->Load("libPGen");
```

and correspondingly with call of DPMGen.

There was a lot of discussions at the forum.

The reason was in some mistakes/bugs in PndDpmDirect.cxx
which was not created by me.

Now I have fixed the bugs.

Errors in libPGen have been erased, and DPMGen is working
correctly.

Aida
