Subject: error matrix calculation for EmcCluster Posted by Dima Melnychuk on Tue, 10 Jun 2008 20:41:00 GMT View Forum Message <> Reply to Message

Hi all,

I have added the error matrix calculation for Emc Clusters. It's accessed with PndEmcCluster::GetErrorMatrix(). It's 4x4 matrix (E,px,py,pz).

I have copied the code which Marc Pelizaeus implemented in "Babar" framework for Panda EMC. (But it should be checked it everything is ported correctly).

It's parametrization of energy and coordinate errors as a function of energy.

Best regards, Dima
