Hi Johan, Kilian and all others,

after killing 100 panda root endless jobs few days ago (many thanks to Kilian) there are now again appr. 150 jobs running since more than 30 hours on the GSI batch system. It seems to me that these jobs are again placeholder JobAgents waiting for real jobs to be submitted by users. The consequence is that only less than 10 jobs in average could run for the Physics Book mass production and analyses during that time. Therefore I would kindly like to ask you to kill most of the jobs in order to provide also CPU resources for the remaining groups.

BTW: As you certainly know the Physics Book mass production should have the highest priority within the PANDA activities right now. Therefore it would be great to organize a fair sharing of the CPU resources within PANDA.

Thanks in advance,
Bertram.
