Hi all,

last week during the tutorial a few people had a problem during the EvtGen installation.

Stefano fixed it by "ln -s /bin/bash /bin/sh" as root.

However, does anyone remember the exact error message?
(I only remember that there was nothing pointing anyhow to a shell problem, so the solution was no obvious).
Neither Stefano nor myself can remember right now.

I would like to put it into the Wiki, that's why I am asking.

cheers, Soeren
