

Dear all,

there will be a PandaRoot EVO meeting
this TUESDAY, 22.07.,
10:00-12:00 (audio testing from 09:30).

1. changes of SVN structure !

See <http://panda-wiki.gsi.de/cgi-bin/view/Computing/Minutes27May2008>
There will be a small difference to the originally proposed scheme:
Please check the following
<http://root.cern.ch/twiki/bin/view/ROOT/SubversionHowto>
-> "Synchronizing a branch with the trunk"

2. More changes

/base -> /pnbase
and related changes

/mcstack -> /pndmcstack
and related changes
(e.g. mother ID, what to define for primaries, secondaries, etc.)

3. global PID, until September
(as we did not have enough time on the last meeting to discuss this)

open discussion:
what variables do we need?
which are ready?
which are not ready?

4. new B field maps

5. vote on track model

preliminary document
<http://panda-wiki.gsi.de/cgi-bin/view/Computing/PandaRootTrackModel>

6. any ongoing work
(e.g. which physics analyses are ongoing until September?
do they work? any problems with rho?
e.g. did anyone already start on the Z?
etc.

Hope to talk to you all.

Soeren (& Johan)
