Subject: bug in geant3(yes i'm not joking))
Posted by asanchez on Thu, 14 Aug 2008 09:51:39 GMT

Dear Pandarooters who are using Geant3,
is it possible to know what has to be set in gconfig, in order to run a standard physics list
for charged and neutral particles(hadrons also).

I'm getting funny results by running with geant3.

i shut particles with a momentum less than 0.5GeV/c
and get particles from time to time whith a moemntum bigger than
 2 GeV/c.

Ok, the funny point is that with geant4 i get results
which are more coherent.

And i need to run with geant3 because otherwise
i acnnot simulate my phics process properly.

Any has any idea???

ALicia.
