Hi all,

after some trial and error and help from Mohammad
I added a small wiki tutorial about

HOWTO work on code in the development repository
and then check in code in svn from development to trunk

http://panda-wiki.gsi.de/cgi-bin/view/Computing/PandaRootSvnDev2Trunk

Please use it!!

Remember that the trunk should always compile!!

Please don't check in unchecked code into the trunk anymore!!

cheers, Soeren
