Subject: Memory consumption grow using genfit
Posted by Aleksandra Wronska on Fri, 07 Nov 2008 14:18:22 GMT

Dear genfiters,

when testing genfit on dch hits I noticed that memory consumption grows steadily with the number of analysed events. In a fast check on stt data I observed the same behaviour, that's why I think it might be a problem in genfit itself (memory leak?). Can anyone have a look?

cheers,
ola
