Subject: Limits on nEvents in CbmRunAna missing Posted by Aleksandra Wronska on Fri, 07 Nov 2008 14:23:56 GMT View Forum Message <> Reply to Message

Dear colleagues,

by accident I ran an analysis macro setting fRun->Run(0,nEvents); where nEvents exceeded number of events in the input file. The macro kept calculating something which was basically a nonsense. Is there a chance to put in a protection against this (foolproof)?

Thanks in advance, ola
