Hi,
it seems to work for me, I have received my first mail asking to remove some warnings
In the website, when I click on some machine, a popup appear with the following message:

The Google Maps API key used on this web site was registered for a different web site. You can generate a new key for this web site at http://code.google.com/apis/maps/.

It is not so clear to me what is the meaning of this, should one get this map ID to see where the servers are located?

And in the first row appears a message:

Warning: Invalid argument supplied for foreach() in /var/www/www-linux/cbm/cbmrtwww/public_html/CDash/viewSite.php on line 118

but maybe this is related to the missing map ID,
