Hi

I updated my repository and the file mentionet got updated. I deleted my build-directory and remade it. I ran "cmake ../trunk" again with the same output. And when compiling i get the same error messages as far as i can see.

Cmake version is:
cmake -help gives this output:
cmake version 2.6-patch 0
This is the cmake-verison in the ubuntu repository.

Hope there is a solution for this.

Regards
Sverre
