Subject: STS geometries
Posted by Volker Friese on Fri, 12 Dec 2008 12:40:23 GMT

In the release branch, there are up to now the old STS geometries "standard" and "allstrips". According to the decision of the STS group (see forum), the allstrips geometry should be the new standard. I changed that accordingly. The old standard (2 pixel + 6 strip stations) was renamed to "sts_hybrid.geo" and "sts_hybrid_full.geo", respectively.

This, of course, does not remove the problem with the overlap of magnet geometry and (now) sts_standard_full.geo, which we still have to resolve.
