Hi,

I heard there was a discussion about licensing of PANDAROOT. I put genfit under LGPL v3 and put proper copyright statements and a copy of the license into genfit. Since we would like to keep genfit modular, so we can use it also in other places, we license it as "Genfit", and not as part of PANDAROOT. This means that if we put PANDAROOT under LGPL (that is what I heard), genfit should be all taken care of as it is.

Christian
