Subject: Re: Current Trunk version doesn't compile Posted by StefanoSpataro on Fri, 13 Mar 2009 11:59:40 GMT View Forum Message <> Reply to Message

Hi,

in theory only the bad tracks should be skipped, and the program should never be aborted. One could propagate a sort of "status" flag to the task, so that when this is False the computation is blocked (maybe with a series of return kFALSE). In this way the task can continue just skipping the bad objects. Just my opinion.
