Hi,
I think this should not go inside the tasks, but inside FairRun::Loop.
The loop should tell us the event number, maybe it could be set the refresh mode by a Set
function (i.e. each 100 events print the event number).
If each task has his own cout, than one could see 10 times the same event number, which is
not so nice.
I have done this modifications two years ago, but were never put inside svn, so now the files
are lost. In each case it is just a matter of adding few line code.
