Hi again,

I forgot to mention that the other place where this appears is in PndDchRecoHit2. It looks like the same code was used in both cases.

If you implement this code in WirepointHitPolicy, then also you dont need to reimplement getDetPlane at all. The detPlane method of the policy is called in RecoHitlfc.

Again, I want to beg your pardon that this is so complex and you dont have any docu. I am working on this! Please help me to get some consistency in the package, by moving this implementation.

If you have any more questions, please do not hesitate to bug me all you want on this!

Christian
