Subject: Usage of B-field maps

Hi,

It's been a while since I did anything serious with the official panda B-field maps, and it seems quite a lot has changed.

In the /input folder there are alone 5 Solenoid maps. Unfortunately, the wiki entry is outdated. The PandaField.C macro quoted elsewhere in /macro/run doesn't help much, either.

Which one(s) of the maps to use?

Thanks for the help

Felix
