Subject: Connection of Geant4 to Geane
Posted by donghee on Thu, 09 Apr 2009 14:04:07 GMT

Hello Panda-developers,

I would like to simulate a simple exclusive events in pandaframework.

If I set a simulation version as TGeant4 in runMC.C,
how can I use genfit package including class DemoPatternRecoTask and DemoKalmanTask.
I have some trouble to use this genfit package.
I'm wondering whether GEANT4 can also load by GEANE.
Most of examples are only introduced the frame with combining of GEANE and GEANT3.

Thank you!
