Dear all,

Could you check my scripts for Panda MC simulation?
I would like to know where is exactly wrong!
You can find an attached tar ball which include two root scripts, copy of g3Config_new.C and geane.C, and 10 events data file.

Please do untar in .../pandaroot/macro/dvcs
A small data file is put in ../pandaroot/macro/dvcs/hepevt/Panda_event_1.txt and problematic gconfig scripts, geane.C and g3Config_new.C can be found in ../pandaroot/macro/dvcs/gconfig.
I didn't touch that. They are original files.

Then you can do run My_dvcs_full_run.C and My_dvcs_full_reco.C
in regular sequence.
If you set My_dvcs_full_run.C to work, probably, it should be worked. then in the file of My_dvcs_full_reco.C you can meet some error relating TGeant3Geo.

Thank you for your kind teaching and debugging in advance!

Best regards,
Donghee
