Hello,

How does the whole output look like? I could imagine that a file was not loaded properly in the beginning or not written correctly in a step before.

For better bug reporting (esp. SegFaults) I suggest to use gdb. The trick is to take the root.exe executable which is called anyway when you run your macros. Just like that: gdb --args root.exe My_dvcs_full_reco.C

You may want to use the spoiler tags for the tons of output.

Kind Regards, Ralf.
