Hi,

first of all I have a comment. The line:

```
Geane->SetField(fRun->GetField());
```

is repeated two times. Only the last one after `fRun->Init()`; should be kept, the other should be removed.

I have the feeling that the problems comes not from STT but from the Demo* stuff before, that maybe is deleting somewhere some object and then stt has problems.

Have you tried to move all the Demo part just at the end of the task list? Just to be sure.

Regards
