Dear CBMers,

I am going to ask the linux system manager to delete the files on /u/cbmgast1. These files occupy 13 GB and clearly violate the policy of not storing data on /u disks. Because of that, the cbmgast1 account has been disabled in the beginning of June, but we did not delete the files yet. Please copy whatever you need from there by, say, September 6. After that we will clean the account and enable it again.

Best regards

Dariusz Miskowiec
