Hi Felix,
   maybe this is helpful (or maybe not): I got this error too and as far as I understand it is connected with writing the std::vector< std::map<int,int>* > failedHits to file, since I could avoid this error just by adding the //! to this line in Track.h:
std::vector< std::map<int,int>* > failedHits; //!
Obviously if we need the failedHits in the file this is not a solution

                Ciao,
                 Lia.
