Subject: Reco Hit for TpcCluster Posted by StefanoSpataro on Fri, 24 Apr 2009 10:44:33 GMT View Forum Message <> Reply to Message

Hello,

when I have started to write the Kalman Task starting from Ihetrack, I have found that the only TPC RecoHit available was TpcPlanarRecoHit, and I have used it with some modification to include even the GeaneTrackRep (PndLheTpcPlanarRecoHit)

I can see that in the repository there is also PndTpcSPHit, which constructs a recohit starting from the TpcCluster.

My question is, which is the "recomennded" recohit to use for tpc? Planar or SP?

Thanks a lot.
