Dear Stefano,

I have actually thought about it. The first version of my PndGemKalmanTask had the errors set to zero. I have changed the line:

```
TVector3 StartMomErr = TVector3(0.,0.,0.);
```

to:

```
TVector3 StartMomErr = TVector3(1.,1.,1.);
```

some 2 weeks ago, but nothing changed.

Thank you anyways for a hint.

yours,
radek
