Hi Florian,

well I wasnt completely right in my mail before, it wasnt /usr/local it was /usr/X11R6. Before I include config.sh my LD_LIBRARY_PATH is completely empty.

Then, after any CMakeLists.txt was changed, make makes a new config.sh which makes LD_LIBRARY_PATH into this:

```
/usr/lib:/usr/X11R6/lib:/home/hoeppe/build/lib:/home/hoeppe/build/lib:/home/hoeppe/fairsoft/tools/root/lib:/home/hoeppe/fairsoft/generators/lib:/home/hoeppe/fairsoft/generators/lib:/home/hoeppe/fairsoft/transport/geant3/lib/tgt_linuxx8664gcc:/home/hoeppe/fairsoft/transport/geant4/lib/Linux-g++:/home/hoeppe/fairsoft/transport/geant4_vmc/lib/tgt_linuxx8664gcc:/home/hoeppe/fairsoft/transport/vgm/lib:/home/hoeppe/fairsoft/cern/clhep /lib
```

Can you please investigate this? Are you sure your LD_LIBRARY_PATH doesnt contain it?

Cheers, Christian
