A last thing:
if I use the svn version 5395 only in cmake directory, everything runs fine, and I have the
following correct message:

Toggle Spoiler
System during compilation: Scientific Linux CERN SLC release 4.7 (Beryllium)
             i686
System now   : Scientific Linux CERN SLC release 4.7 (Beryllium)
             i686

Then I think it is just a problem of the last cmake commit.
