Subject: Installation for base.so
Posted by donghee on Wed, 06 May 2009 10:41:07 GMT

Dear all,

I try to install pandaroot in SLC4.
I found a small bug at the library part, namely, libBase.so.0.0.0.

```
---------------------------------------------------------
[100%] Built target Lumi
Install the project...
-- Install configuration: "Debug"
CMake Error at base/cmake_install.cmake:42 (FILE):
  file INSTALL cannot find file
  "/afs/cern.ch/user/d/donghee/d86/buildpanda/lib/libBase.so.0.0.0" to
  install.
Call Stack (most recent call first):
  cmake_install.cmake:37 (INCLUDE)

make: *** [install] Error 1
---------------------------------------------------------
```

Then I'm going to pandaroot/base, make an extra procedure
>cd base
>make

```
---------------------------------------------------------
Linking CXX shared library ../lib/libBase.so
[100%] Built target Base
---------------------------------------------------------
```

After this, the library file,libBase.so is appeared! It looks fine.
Is it no problem? or is this some potential source of creating problem?

Thank you!
