Subject: Requirements Posted by Volker Friese on Tue, 12 May 2009 00:12:29 GMT View Forum Message <> Reply to Message

OK, I implemented that and it works. What is required from the framework is:

1. Introduce a method virtual void Init() { }; in FairPrimaryGenerator.h

2. Declare the private members of FairPrimaryGenerator protected (in fact, this is needed only for fStack).

3. Declare the method FairPrimaryGenerator::GenerateEvent virtual.

4. Add if(fEvGen)fEvGen->Init(); somewhere in FairMCApplication::Init
