Hi,  
if you ahve used the macros in tutorials/lhetrack, then everything should be fine.  
I can see that most of your electrons are going to 150 degrees, and I am not sure on how much is the resolution there. In the central part the resolution at 3 GeV should be 6%, then I would expect something worse at 150°. Therefore, maybe it is just a problem of bad resolution at backward angles.
