Subject: Re: Question about PndLhePidTrack() Posted by StefanoSpataro on Thu, 14 May 2009 14:01:19 GMT View Forum Message <> Reply to Message

Hi,

"Point" means using montecarlo points, and of course you have wonderful resolution. Hit means that youa re using points after full digitization and recontruction, then of course you have also noise and the resolution becomes worse, but more realistic.

Ihetrack is a helix fit, so it assumes a constant value (2T) of field in the central region. There is no need for map, not in the helix approximation, not in the central tracker region.
