Subject: Re: Question about PndLhePidTrack() Posted by donghee on Thu, 14 May 2009 14:38:10 GMT View Forum Message <> Reply to Message

Dear stefano,

If Ihetrack fitter assume constant 2T magnet in the central region, how about endcap region? Is it still assumed constant magnet field for endcap region?

Is it possible to improve the resolution for large angle track, i.e., theta > 150 degree in the reconstruction level and tracking procedure?

Thank you!
