---

Dear all,

i have a problem with the endcap again. It is a shift of 2 quarters of the endcap by a distance of few cm in z direction. It only appears for the positions of clusters and not for hits or digis, also i can not see it in the sim\_emc.root.

the following pictures are from a simulation of photons (1GeV,  $0 < \theta < 25^\circ$ ,  $0 < \phi < 360^\circ$ , geant4, pandaroot\_trunk, standart macros from pandaroot/macro/emc) can anyone explain this?

Thank you for your help in advance,  
Irina
