Dear Christian,
thank you very much for your advice.
Actually i have taken your DemoSPRecoHit. class
as example. And if i use LSLtrackrep it is working well.

If instead of SpatialHitPolicy i use the PlaneHitPolicy
then i'm getting huge values for the chi square.
But that is something what can still be investigated.
Nevertheless i appretiate very much your advices, .

I will take a look into the StripHit.h,cxx, and i will let you know.

by best regards
ALicia.
