Hi Stephano,
try to do the following,

by doing the same procedure as before in your macro,

```
FairRunAna *fRun= new FairRunAna();  
fRun->SetInputFile("points_tpccombi.root");  
fRun->AddFriend("digi_tpccombi.root");  
fRun->AddFile("points_tpccombi_1.root");  
fRun->AddFriend("digi_tpccombi.root");  
fRun->SetOutputFile(outFile);
```

go to your task and
add before calling FairMCPoint::GetTrackID(),

if pointer(your pointer to PndMvdPoint) is zero
then continue;

then you will be able to run it completely.

good luck.

ALicia.
