Dear Irina, dear All,

last time few checks for the forward endcap emc have been done  
to find the source of the problem with 2 different Z-positions  
for 2 diagonal quarters of the endcap  
and it seems that, finally, it is found.

To solve that problem I need a bit of time.  
Since the collaboration meeting is very soon  
and I am busy with the analysis, I will correct it afterwards.

Best regards,  
Ola.
