Hi everybody,

I was wondering why there are no answers to my message from 1 week ago about the problem with PndTrack and FairTrackParX. These are important issues, and they can not be left to me alone to deal with. I neither have the responsibility nor the experience to decide these things on my own.

The track parameters are a very central part of the framework. If you would like to keep them as they are now, please tell me how to implement them in PndTrack.

I still suggest to change the way they are implemented, but as I said: My opinion on this can not be the only one. And there is a lot of code which already depends on these classes, so any changes are a lot of work for a lot of people.

Cheers, Christian
