Hello again,

Surely you will have to register at least the TClonesArray which stores the PndTrack objects (I tell it just to avoid confusion). What I meant is to store the track parameter objects as well in TCAs and reference them by storing an index in the PndTrack.

Anyway you're right that the PndTrack should carry these objects by itself.

Can root carry these pointers even into a root file and recover it later on? I thought that not. If yes, there is no big point in discussing further - do it as you like.

Greetings, Ralf.
